Mr. Rob Catania

Re: Wine Enhancer

Dear Rob:

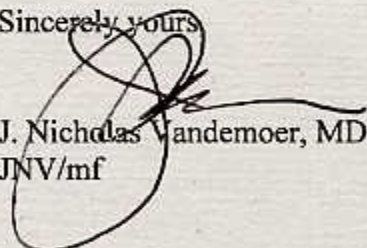

I have evaluated your Wine Enhancer in regards to its affect on allowing patients with a wheat, yeast, and stabilizer allergy and/or chemical sensitivity. I have several patients, including myself, that are intolerant of these compounds, and therefore cannot drink wine, especially red wine.

As an Board Certified Otolaryngic Allergist, I have had difficulty allowing these patients to drink wine because of their relatively severe side effects. Even food allergy injections have not been successful in their circumstance because of the rapid systemic absorption of this liquid versus those same compounds present in solid food.

The Wine Enhancer seems to have a very beneficial effect to these patients, including myself, allowing them to drink a moderate of wine without any severe side effects.

Should you wish further information. Please feel free to contact me.

Sincerely yours

  
J. Nicholas Vandemoer, MD, FACS
